TEAM5 Status Report #15

Date: 3/30

Status Paragraph:.The frontend for the secondHomePage is mostly done (maybe some tweaks later on if needed).

Accomplishments	Notes	Date
Make it so that the one skill is taken from user, in order to query for events.		3/29
Fix styling for how the events are displayed. Make it look similar to the search page.		3/29
Fetching friends for messages now uses endpoint; all messaging endpoints and fetches use mongodb connections now		3/30
User account system w sessions is completed.		3/29
Search by event functional, only using Mongo for search. Added "Add Friend" button.		

Plans (for next meeting):
- Ameya
    - Limit display to 5 events max.
    - Add/Delete event functionality.
    - Create event functionality.
    - Make it so that if users has no events added, switch display to show recommendations of events.
- Cole
    - Websocket implementation with user sessions
    - Integrate user sessions with messaging and ensure
- Tobias
    - Create functionality for users to create skill tags
    - Create functionality to delete skill tags
    - Messaging "exchange" button

- Unfriend button if you are friends
- Chris
  - Make the add friend button functional and add profile pics/info to user details. Connect with profile page
  - New accounts / logged in profiles are findable
- Andrew
  - Make single consolidated user database
  - Add an admin user
